

Race Pace Durability

HALF MARATHON · 15 WEEKS

Practise the race.

START / SETTLE / HOLD / FINISH

Enter the slower edge of your assigned band. Find the rhythm. Hold it when you feel good enough to go faster. Finish with control; a fast finish is not required.

Begin with the broken reps. Check how each rep started as well as its average. The continuous sessions rehearse the same behaviour for longer.

Once you can find the band reliably, try a short middle section without looking at pace. Keep the watch recording and compare afterward. Start with one mile; extend only when it stays controlled. This is optional practice, not a pass-or-fail test.

Record the opening split, any drift or correction, effort and reserve. If you opened too fast, that changes how we read a late fade. Your final race strategy comes from these rehearsals, your current assignment and race-day conditions.

W1-3 · Broken reps

Enter each rep at the slower edge of your assigned band. Settle, then hold. Do not sprint the opening or bank time for later.

W4 · 5 continuous

Start restrained. Settle into your assigned band. Hold it through the final mile; finishing well does not require running faster.

W6 · 6 continuous

Let the first mile feel restrained. Settle into the band and keep the middle even. Finish with control.

W9 · 8 continuous

Do not bank time early. The first two miles should leave the next six available. Hold your band instead of chasing a faster average.

W12 · Last 12 after 4 easy

Enter the assigned band after the easy running. Settle before pressing. Hold the middle; finish in control without chasing lost seconds.

Race week

Rehearse the opening you know from training. Settle, hold, then use only the reserve the earlier miles have left.
